An economical and user-friendly tool for producing a mirror-like surface finish.

DIAMOND BURNISHING TOOLS WITH REPLACEABLE DIAMOND STEMS FOR A LOW COST METHOD TO PRODUCE AN ULTRA-SMOOTH SURFACE FINISH ON LINEAR SURFACES.

The Diamond Burnishing Tool is used in linear applications (ODs, IDs, and face surfaces).

As the part is turned, the diamond, under spring pressure, is fed across at a feed rate of 0.003" to 0.004" per revolution at a maximum of 750 SFM.

Available in inch and metric slim-line, square, offset, on-center, and boring bar styles.

Diamond Tool Kits

All diamond burnishing tools are also available as kits which contain: a complete tool, spare diamond stem, spring and Allen key.

The kit is in a plastic case that protects and ensures the life of the tool.

The kit option is the most economical to purchase, giving significant savings compared to buying the parts separately.
**OUR STANDARD DIAMOND BURNISHING TOOLS:**

<table>
<thead>
<tr>
<th>Tool #</th>

The stick tool design of the S2300-00 (with the 0.750" shank) makes the tool ideal for smaller lathes and allows for close approaches. The offset design sets the tool on correct centerline.

The boring-bar style tool (S2295-00) is designed for lathes or turning centers to provide an improved surface finish in bores from 0.500" to approximately 1.375" diameter x 2.800" deep. This burnishing tool can be used on most metals with a hardness below Rc40.
The stick style diamond burnishing tool is designed for use in turning machines. The tool should be mounted so that the diamond is perpendicular and on center to the surface being burnished.

S2295-00

Can be used on most metals with a hardness below HRC40.
Autoimate your hand polishing operations...

**THE JOB**
- Part Material: 4140
- Diameter: 2.500"
- Length: 1.250"
- Stock Allowance: 0.0002" - 0.0005"
- Pre Burnish Surface Finish: 80μRₐ

**THE SOLUTION**
- Tool Used: S2300-00
- Speed: 400 SFM
- Feed: 0.004 IPR

**THE RESULTS**
- Post Burnish Surface Finish: 2μRₐ
- Cycle Time: 30.68 sec

...and get consistent ultra-smooth surface finishes.
